NORTH KINGS GSA NEWS

You are receiving this newsletter as a property owner located within the Fresno County Undistricted Areas of the North Kings Groundwater Sustainability Agency (See map below)

Overview:

The Sustainable Groundwater Management Act (SGMA) was signed into law in 2014. The law requires groundwater subbasins like the Kings subbasin to eliminate overdraft caused by over-pumping and stabilize the aquifer by 2040. The North Kings Groundwater Sustainability Agency (GSA) is the local agency in your area tasked with ensuring the goals of SGMA are achieved. The North Kings GSA is comprised of multiple local agencies, including the County of Fresno which represents those property owners located outside of Cities of Fresno and Clovis and Fresno Irrigation District boundaries.

As required by SGMA the North Kings GSA submitted a Groundwater Sustainability Plan (GSP) in January of 2020, which is currently being reviewed by the California Department of Water Resources for compliance with regulatory requirements. In the meantime, the GSA is beginning to implement the adopted GSP including development of projects in order to sustainably manage groundwater. As a result, decisions made by the NKGSA may affect the operation of your water wells in the future.

Who Uses Groundwater?

California depends heavily on groundwater to meet its water supply needs. Groundwater supplies approximately 40 percent of the state's water, with about 60 percent coming from surface water.

Households outside of urban areas typically have a private domestic well, as opposed to being connected to a community public water system. Private domestic wells typically tap shallower aquifers. Public water systems also rely upon groundwater, but since they are of higher-demand, wells are drilled much deeper, accessing lower aquifers.
